FOR IMMEDIATE RELEASE

Ted Warring to Spearhead Ongoing Technical Development at MSI *Promoted to 'Chief Scientist,' Warring will direct future products for MSI*

PHOENIX — AUGUST 1, 2005 — Multi-Systems Inc. (MSI), the hospitality industry's leading provider of fully integrated property-management and marketing systems has promoted Ted Warring to the position of Chief Scientist. Based on his valuable contributions to MSI's product line, Warring has advanced progressively since joining the Development team in 1997.

"Ted's latest projects, Sales Driver and the MSI data migration tool, have been extremely well received by our customers and warrant this promotion," said Chuck Haaker, MSI VP of System Architecture. Sales Driver is MSI's new software designed to streamline workflow and accountability for limited service properties, and the 'one button' data migration tool has enabled the transfer from DOS to a Windows based system with virtually no interruptions.

"He has already taken on most of the responsibilities of Chief Scientist for MSI, and as we move forward, Ted will be instrumental in making recommendations for growing our systems portfolio and providing technical guidance as we move into new technologies," Haaker said.

Warring's 20-plus years experience in computer science, artificial intelligence research and business automation software development provide him with a strong foundation for advancing the MSI product line, Haaker added.

In the Chief Scientist role, Warring will continue as lead technician on the WinSam product (MSI's multi-tiered program that offers extensive Account, Sales and Catering tools seamlessly integrated with MSI's WinPM property-management system), as well as serve as team leader and technical advisor on other projects. He also will spearhead the development team as they focus on advanced systems that positively impact hoteliers' bottom lines.

"I am proud to be part of a highly capable team as we take on the challenges of next generation technology," Warring said. "As we review newer technologies, I will focus on setting the hospitality industry standards for yield management tools."

Rick Munson, MSI President, said he too is proud to have Warring as a part of the MSI family.

"Ted is a great combination of technologist and business man," Munson said. "He brings to MSI the ability to communicate in laymen's terms the benefits of new technology developments and how it can help our customers maximize their businesses. We are thrilled to have such a qualified person as part of our technology team."

About MSI

MSI, founded in 1990, is a leading supplier of hotel technology and property management systems. With an installed customer base of more than 2,800 hotels and resorts throughout North America, MSI is one of the lodging industry's largest providers of fully integrated property management, sales, marketing & catering, point of sale, centralized corporate services, and wireless PM systems. MSI specializes in "total system solutions" for management companies and hotel chains by providing central reservation and property system integration. MSI's customer support team has been recognized as one of the best in the industry and is the key to the success of their products and services.
