FOR IMMEDIATE RELEASE

Levi to Solidify Infrastructure, Customer Integration at MSI
Leor Levi joins Multi-Systems Inc. as Director of Information Technology

PHOENIX — AUGUST 6, 2009— Multi-Systems Inc. (MSI), a leading provider of fully integrated property-management and marketing systems, is enhancing its technology infrastructure and customer integration capabilities. Leor Levi, newly appointed director of information technology, will lead the effort.

“During our relocation to a larger facility in April, Leor played a key roll as a contract employee in ensuring that all of MSI's technology transitioned smoothly,” said Tim Tiller, MSI Chief Operating Officer. “Throughout the entire process, he was able to expand and build upon our solid technology platform by offering many suggestions on ways to complement our existing infrastructure. Leor’s performance greatly exceeded our expectations, and earned him the coveted director of information technology position.”

Tiller explained that after 10 years of successful growth and expansion of MSI’s diverse product portfolio, the company needed more space not only for new technology development, but to house a growing staff and a larger, more robust Customer Assistance Center. Now, as the industry continues to grow and change, MSI is better positioned to grow and change with it, and Levi will lead the way for technology growth and expansion.

Levi said he is thrilled to become a permanent part of this customer-focused and technology-driven company.

“It’s rewarding to be part of an organization where suggestions for improvements are welcome, heard and implemented,” Levi said. “MSI is committed to providing its customers and employees the best available technology. It shows in their willingness to put beneficial ideas into action and in their support of new thoughts and processes.”

Leading the Product Distribution Center - Levi’s focus will be to improve customer technology integration and continue to build a solid infrastructure for the company. The PDC (Product Distribution Center) team will fall under his leadership. Levi will work closely with each MSI department to ensure that systems deployed to customers are configured correctly and installed efficiently.

In addition, he will take the responsibility for overseeing and supporting all of MSI's internal technology. This will include the transition to newer technology for employee communications and the installation of more efficient software for the CAC (Customer Assistance Center) team.

“We want to provide a solid infrastructure and advanced technology to our customers and staff with standardized features for ease of use, yet customized applications to meet individual needs,” Levi said.

Prior to joining the MSI team, Levi spent a year in Iraq working on a government contract providing technical support for the Army computer systems. Levi has more than 10 years experience in information technology and has received extensive training and certification in a number of specialized applications including A+, MCSE, CISCO, Checkpoint Firewall, and several others.

TECHNOLOGY EMPOWERING
the LODGING INDUSTRY

About MSI

MSI, founded in 1990, is a leading supplier of hotel technology and property management systems. With an installed customer base of more than 2,800 hotels and resorts throughout North America, MSI is one of the lodging industry's largest providers of fully integrated property management, sales, marketing & catering, point of sale, centralized corporate services, and wireless PM systems. MSI specializes in "total system solutions" for management companies and hotel chains by providing central reservation and property system integration. MSI's customer support team has been recognized as one of the best in the industry and is the key to the success of their products and services.
